

Dear AEA Member:

The Aircraft Electronics Association is pleased to announce the collaboration with the Learning for Life Aviation Exploring program in their promotion of aviation careers to both young women and men, age 14 (who have completed the eighth grade) through 20 years of age. The Aircraft Electronics Association encourages its members to become involved with Aviation Exploring.

The local Learning for Life professional staff will provide help in program planning and training for adult volunteers wishing to participate in this worthwhile endeavor. For information about starting an Aviation Explorer post, or for the location of the local office, please check out their web site at [www.aviationexploring.org](http://www.aviationexploring.org). When you call, please ask to speak with the Aviation Exploring program representative.

Aviation Exploring promotes character building and career education through challenging programs in career achievement opportunities, leadership experience, character education activities, life skills, and service learning activities. Together, we can make a huge impact on the education process of America's youth as well as enrich their lives.

Sincerely,

A handwritten signature in black ink that reads "Paula Derks". The signature is fluid and cursive.

Paula Derks
